Supervised By: Dr. Yaqoob Al-Slais

Problem Statement

- **Fragmented Charitable Activities:** Charities operate independently, with no unified platform connecting donations, volunteering, or assistance requests.
- **Difficulty Finding Reliable Information:** Donors struggle to locate verified charities, active campaigns, or accurate contact details.
- **Limited Access for Beneficiaries:** People in need often do not know where to request help or which organization handles specific cases.
- **Scattered Volunteering Opportunities:** Volunteers depend on informal announcements, making it hard to discover opportunities or track participation.
- **Lack of Transparency & Coordination:** Manual processes cause delays, duplicated efforts, and reduced trust within the charitable ecosystem.

PROJECT OBJECTIVES

Design a Unified Charity Platform:

Build a centralized system that connects all registered charities in Bahrain in one accessible mobile app.

Enable Secure Digital Donations:

Provide donors with verified charities, transparent campaigns, and fast, safe digital payment options.

Support Volunteering & Assistance Requests:

Allow users to register as volunteers, apply for initiatives, and submit help requests directly through the app.

PROJECT OBJECTIVES

Manage Big Campaigns in One System:

Allow multiple charities to collaborate in joint campaigns fully managed inside AWN.

Improve Transparency & Collaboration:

Enhance trust by offering real-time progress tracking, clear communication, and organized charity operations.

Key Insights from the Literature Review

Research shows that while GCC countries have developed advanced digital donation platforms like Ehsan, DubaiNow, and Qatar Charity, these systems remain mainly donation-focused and are often tied to government portals. Bahrain has strong digital payment adoption through BenefitPay but still lacks a unified platform that brings together donations, volunteering, beneficiaries, community engagement, and complete charity coverage. This fragmentation creates inefficiencies, limited transparency, and weak coordination across the charity sector, highlighting a significant gap in Bahrain's digital ecosystem.

AWN

How AWN Compares to Existing Charity Systems

Compared to GCC charity platforms, which focus primarily on donation services, AWN offers a broader integrated ecosystem. AWN combines donations, volunteering, registered charities, community groups, big campaign management, AI assistance, and real-time tracking features not present collectively in existing systems. While GCC platforms provide secure payment pathways, they lack unified charity coverage and volunteer management. AWN fills this gap by offering the first all-in-one community-driven charitable platform designed specifically for Bahrain's needs.

Findings: Who Volunteers before ?

Survey results show that most participants (114 people) have volunteered before, indicating strong willingness to serve the community, while a significant portion (74 people) have never volunteered due to lack of access or information. This highlights the need for a platform like AWN, which makes opportunities easier to find and encourages new volunteers to get involved.

12. Have you volunteered before?
هل سبق لك التطوع من قبل؟

● Yes	114
● No	74

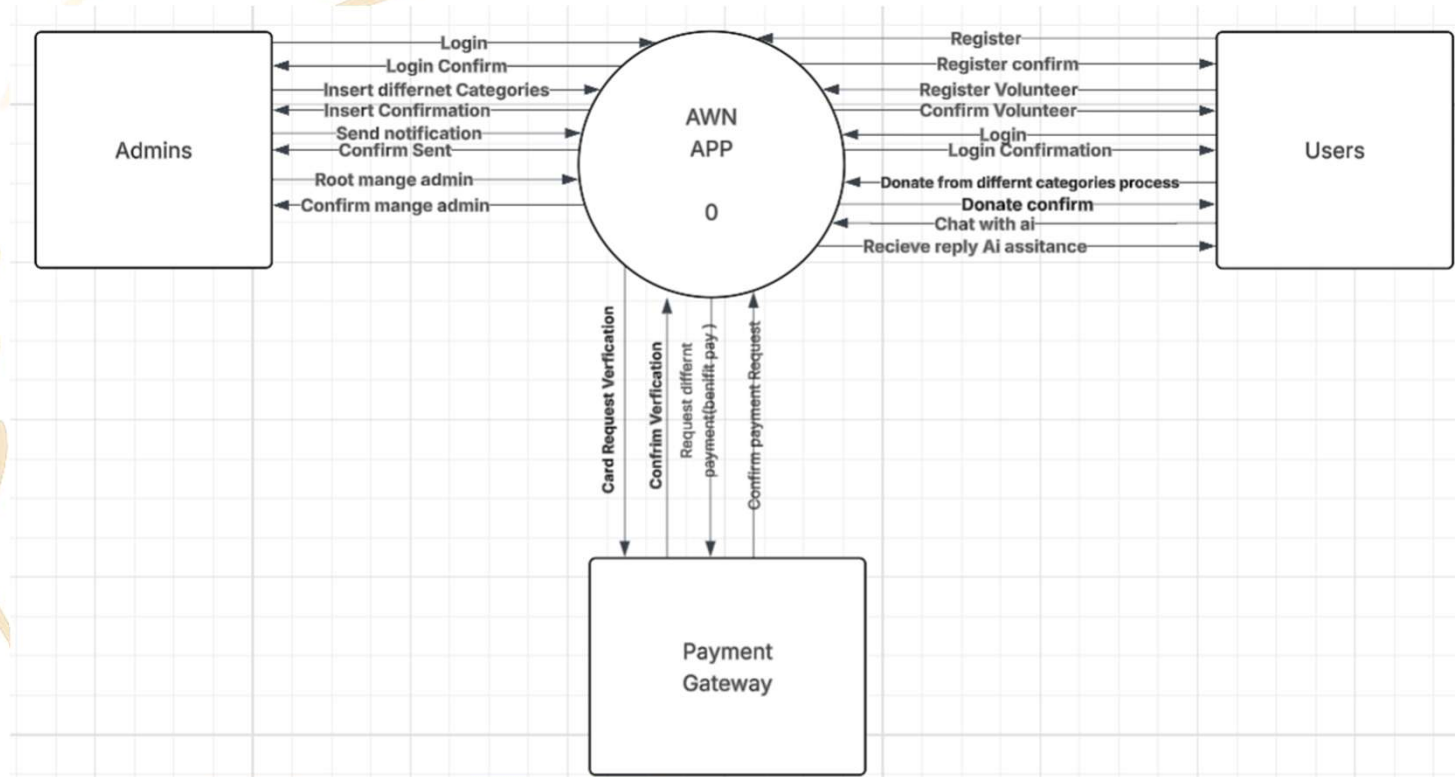

Findings: Volunteer Motivations

Participants expressed that easier sign-up, recognition, flexible schedules, and clear impact would motivate them to volunteer more often. These needs match directly with AWN's features, such as simple registration, transparent progress tracking, and organized volunteer schedules, making volunteering more attractive and accessible for everyone.

15. What would encourage you to volunteer more often?
ما الذي قد يشجعك على التطوع أكثر؟

● Easy app sign-up for opportunities	سهولة التسجيل في التطبيق للفرص المتاحة	63
● Certificates or recognition	شهادات أو تقدير	46
● Flexible volunteering schedules	جداول تطوع مرنة	33
● Clear impact of my work	تأثير واضح لعملي	44
● Other		2

What used in our system

- FlutterFlow used to design and build the mobile application interface.
- Supabase provides backend services, authentication, and storage.
- PostgreSQL serves as the main structured database for all platform data.
- Real-time Update For data.
- ROW Level security rules ensure controlled access and data protection.

Key Features

Unified Charity Directory:

Browse all registered charities in Bahrain with location, contact, and active programs.

Secure Donations:

Donate instantly through safe payment methods with transparent tracking.

Volunteer Opportunities:

Explore, register, and track volunteer hours directly from the app.

Key Features

Big Campaign Management:

Joint campaigns organized by multiple charities, fully managed through Awn.

Real-Time Progress Tracking:

View donation totals, campaign updates, and participation in real time.

Profile overview:

user will know how many times he donated and how many hours he volunteered

Project Risks

- **Data Security & Privacy:** Handling donations and user data requires strong protection against leaks or unauthorized access.
- **System Downtime:** Any server or network failure could interrupt donations, volunteer registrations, or charity updates.
- **User Adoption Challenges:** Older users or non-tech users may struggle to switch from traditional charity methods.
- **Payment Integration Issues:** Errors with BenefitPay or card payments could affect donation flow and user trust.

The background features a light cream color with faint, golden-yellow line art. It includes several hands in various poses, some holding sprigs of leafy plants. In the center, there is a large, soft yellow heart containing two small sprigs of plants. The overall theme is one of care, support, and growth.

AWN

Future work:

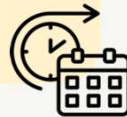

Web Version of AWN:

Extend access beyond mobile to support wider user groups.

Multi Language Support:

Add languages (Arabic and more language) for broader accessibility.

AI-Based Suggestions:

Intelligent recommendations for donations and volunteering.

Improved Accessibility Features:

More user-friendly UI for elderly users and people with disabilities.

AWN

Conclusion

1. **Unified Charity Ecosystem:** AWN brings all charities, donors, volunteers, and big campaigns into one platform, eliminating fragmentation.
2. **Improved Transparency:** Verified charities and real-time campaign tracking help increase user trust and confidence.
3. **Higher Operational Efficiency:** Centralized digital tools reduce manual work, duplication, and coordination challenges.
4. **Enhanced Accessibility:** A simple mobile interface allows anyone in Bahrain to easily donate, volunteer, Big Campaign , charities.
